

RILS Remote Indicator Light Station

RILS

Remote Indicator Light Stations

RILS (Remote Indicator Light Station) applications vary where light indicators and an optional audible device is required. The RILS is custom designed depending upon the light options requested. In addition, there are surface and flush cover options available. The applications for the RILS vary from alarms to system operational notifications, interlocking systems, and many others. The RILS is offered as standard single-gang, standard double-gang, and standard 8" x 6" sizes. Other sizes can be custom manufactured upon request. Standard back boxes are not provided with the RILS.

Depending upon the cover size, light sizes may vary and a desired IP rating may not be available. The audible device decibels will vary with supplied voltages.

Covers for the RILS are available with options of two stainless steel grades. When colors for the indicator lights are selected, we will configure the lights with an optional audible device in the selected cover to fit properly.

Features:

- Voltage for Devices: 9 - 24 VDC
- Large Light Devices are IP68 Rated
- Single-Gang RILS with More Than One Large Light will be a Large Multiple Color Light
- Small Light Devices are IP65 Rated
